NOVEMBER 2017

TRAINING UPDATES:

GENERAL:

TRAINING:

I am working on the winter/spring schedule. If you have special class requests, feel free to contact me. I do save time slots for special classes.

I have a hard time filling a **Shoot House Instructor** class. I will take the max of 4 to help teach a class and certify them at the same time for Shoot House Instructor. I have three slots left. This way I can run 4 concurrent stations and students will get max reps and train the trainers at the same time. E-mail me for more information.

EQUIPMENT:

Winchester 9mm +P+

I received some great reports on this round from the field. I decided to test some through glass and on paper on a flat range with my G26 and G19.

GLASS

Fired from the front of the hood, the bullet went through the windshield, point of aim, point of impact.

The lower round is the 9mm test round.

I deliberately fired the round from high to low to see the penetration.

It went through the seat, through the skin of the truck and lodged into the outside bed of the truck, bulging out the bed liner.

Page 5

RECOIL

Not bad, similar to a +P, just a tad more snappy.

ACCURACY

Accuracy was comparable to the Speer GoldDot 124 Grain.

Conclusion:

If you want to upgrade your 9mm to a well-designed bullet, this might be the one for you.

IN CLOSING

Thanks and we look forward to seeing you on the range.

Paul R. Howe
